the way injections can  
lead to better overall health  
– interventional pain management  
is the safer alternative  
to dangerous pain medications

## Mobile Medical Associates (MMA)

offers a professionally developed specialty service suite, designed to enhance an already best-in-class quality care model. We strive to provide the best full-service support system for at-risk patients, families & caregivers.

### Interventional pain management is

the discipline of treating and curing problems of joint and ligament pain by use of safe injections. This form of therapy avoids putting older patients in risky situations, such as unnecessarily prescribing opiates for pain relief. Patients with complications from chronic conditions like diabetes may be able to avoid surgical procedures by receiving injections to the affected portion of the body. Most injections we offer are covered by Medicare and can benefit all patients who haven't found sufficient relief from their pain through the use of medication or physical therapy alone.

Our board-certified APRN-Cs specialize in interventional pain management with years of experience in treating and curing joint and spinal issues. Unlike most offices that provide pain injections, MMA uses the extreme accuracy of ultrasound technology to ensure the highest positive outcomes for our patients.

For patients with shoulder, elbow, wrist, back, hip, knee, or ankle pain, selecting the right injection may completely improve the quality of your life. Mobile Medical Associates can deliver these services to the patient's residency if mobility has become difficult due to the pain. Additionally, MMA has the ability to write referrals for physical therapy, occupational therapy, and other forms of rehabilitation.

At MMA, we go the extra mile to create a friendly and comfortable environment for you and your family. Our ever-growing network of medical professionals will give full attention to the care that we know you and your family deserve.

// this form of therapy avoids putting older patients in risky situations //

services provided safely in your residence
